AMAZING FACTS ABOUT TTSYSTEM

TTSystem is made to cover any and all needs of travel industry using its various modules, all under one roof, regardless of size, business model or the markets of your company. Being in the same industry for last 15 years, and serving more than 30 million passengers globally, thought us how to develop TTSystem to cover all the complication of travel and tourism industry. At TTSystem, we did our best to make the system customizable for you, to keep you independent and able to customize the system in the way you need without needing our help.

Using fragmented system architecture, TTSystem components are able to run standalone on different servers to keep your online services always available and easy accessible around the world. The structure of system is designed carefully to be able to expand as long as your business grows no matter if you have thousands or millions of users! TTSystem's sophisticated APIs made it possible to develop and maintain you own B2B/B2C front office or mobile applications if you wish not to use the system default ones.

“

We know your concerns and the bottle necks of travel businesses! That's why we made TTSystem for you!

SUCCESS
IS WAITING FOR YOUR
AWAKENING

Features in Short!

At TTSYSTEM team, we have taken one step ahead by providing an online engine to request visa or entry permits. TTSYSTEM VISA module is highly customizable and you will be able to define multiple visa types for any countries with your own rules and policies. Automatic tracking of the passenger's entry and exits and their VISA application status is also provided by TTSYSTEM visa module.

Not only TTSYSTEM is offering more than 15 readymade inbound web service connections, even your website can be a supplier for others, using the outbound web service connections of TTSYSTEM.

DESTINATIONS & HOTELS

Offering the readymade data of 350000 hotels around the world, the search engine is supporting complicated rate seasons, events, dedicated and floating inventories, 7+ promotion types and automatic confirmation of booking. System is designed to map your products with the products of web services to provide a complete product list without duplication.

TRANSFERS & TOURS

The transfer search engine can provide two different methods of transfers, one as a pre-defined point to point transfers and the second one as the smart calculation of rates, based on the duration and distance of the trips. The tour search engine is also supporting the online bookings of excursions, sightseeing and tours, considering events, rules and inventories.

TICKETING & HOLIDAYS

Offering the readymade data of airlines and airports around the world, Ticketing search engine is able to provide online reservation of flights, trains and cruises based on the defined rules, rates, events and inventories. The holiday search engine is offering two methods of booking for static and pre-defined packages or the dynamic packages customizable by passengers. The packages can include visa, hotel booking, excursions and the ticket.

HOW IT WORKS !?

It is developed as a modular system, easy to upgrade or downgrade. The ERP/CRM module is acting as the platform of system and there are 17+ other modules available to install on top of it. Please contact us to get the list of the modules and their features in detail.

Built-in CMS

Modify the contents of your website whenever you need by just few clicks.

Built-in ERP and CRM

Generate various professional account reports without help of your accountant.

Responsive Design

Designed to work cross browser on all screen sizes and various devices.

Our Best Support

There are specific modules developed as part of TTSystem platform to provide hassle free support through the system itself. Not only the users of system are able to request for the support at the time of difficulties, even the system itself is automatically sending logs and reports to our programmers in case of any issues. Also there are many tutorials, articles and FAQs in different languages available in the TTSystem website to train your team and answer their questions.

TTSystem is developed with keeping following aims always in our mind:

1 SECURITY

In the web applications security is the biggest concern for us. Using AES256 encryption method, TTSystem is encrypting all data in databases to ensure the security of your valuable data. Multiple user groups and user permissions will always prevent the unauthorized access to your data and multilayer user auditing will provide strong user activity logging feature to improve the security of the system. Combination of hardware network firewall, secure socket layer and the application layer smart firewall, provide a strong barrier in front of intruders to your website.

2 EASE OF USE

Designing the user interfaces based on 'Material Design' standards, will provide well known, friendly and clean user interface to work. In addition to the interfaces, offering more than 70 languages and 170 currencies to the user, will help them easily navigate through the website.

3 INTELLIGENT CODE

We believe that, computers can make intelligent decisions for your business, if they are well trained to do so. Using computer artificial intelligence, we have made the TTSystem capable of automatic voice, text and image recognition to prevent the human errors and provide features like automatic typing of forms and applications using uploaded documents.
